CopyNotify! (Version 1.4.x)

Feature Data Sheet

Save Energy	This feature alerts you of IDLE computers on the network. Switching off computers which are not in use saves energy and lowers electricity bills.
Auto Shut Down	Auto Shut Down automatically shuts down computers on the network at a predefined time. This energy saving feature ensures that computers are not left on overnight (after office hours) hence reducing electricity bills.

✓ CopyNotify! Server Features

Feature	Description

CopyNotify! (Version 1.4.x)

Feature Data Sheet

- ✓ Offline Notifications/Alerts generated by End Point (CopyNotify! Client)

Offline Notifications / Alerts are generated when the CopyNotify! Client cannot connect to the CopyNotify! Server and cannot transmit the notifications.

In this case the notifications are stored locally and then all are transmitted to the CopyNotify! Server as soon as it is possible to connect to it and has been able to successfully send a notification / alert to the CopyNotify! Server.

- ✓ Viewing Alerts / Notifications Generated

The alerts / notifications can be monitored / viewed / received / stored in the following ways.

	Description
Log Files	All alerts / notifications are stored in daily log files. These log files can be used for further processing and analysis.
History Window	A history window is also available which gets updated with a notification as soon as it reaches the CopyNotify! Server.
Desktop Balloon Alert	All Alerts/Notifications that are received pop – up as desktop system tray Balloon Message.
Email Alerts	All Alerts/Notifications that are received can also be sent to you via Email. * Only Plain Text Authentication Implemented for SMTP
